

Predicción

Yo

10/4/2019

#Esta es mi práctica de regresión #Usar la libreria HERE. Aqui puedo escribir lo que quiera, si fuera un script de R no podria.

```
mData=read.csv("Advertising.csv")
vY=mData$Sales #Creo la variable dependiente
mX=cbind(1,mData[,2:4]) #Creo la matriz de variables independientes con una columnas de unos para la co
head(vY) # Muestro el vector Y
```

```
## [1] 22.1 10.4 9.3 18.5 12.9 7.2
```

R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see <http://rmarkdown.rstudio.com>.

When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

```
##      speed      dist
##  Min.   : 4.0    Min.   : 2.00
##  1st Qu.:12.0    1st Qu.: 26.00
##  Median :15.0    Median : 36.00
##  Mean   :15.4    Mean   : 42.98
##  3rd Qu.:19.0    3rd Qu.: 56.00
##  Max.   :25.0    Max.   :120.00
```

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
